

Controls Assessment

Overview

This document reviews the security controls currently implemented at Botium Toys during the internal security audit. The assessment identifies which controls are active and which areas need improvements to strengthen the company's overall security posture.

Administrative Controls

Control	Implemented	Notes
Least Privilege	No	Employees currently have wide access to internal and customer data
Disaster Recovery Plans	No	No formal disaster recovery procedures are currently in place
Password Policies	No	Password policies exist but do not meet modern complexity standards
Separation of Duties	No	Separation of duties has not been implemented

Technical Controls

Control	Implemented	Notes
Firewall	Yes	Firewall rules are configured to filter network traffic
Intrusion Detection System (IDS)	No	No IDS solution is currently deployed
Backups	No	Critical business data is not currently backed up

Antivirus Software	Yes	Antivirus software is installed and monitored regularly
Manual Monitoring for legacy Systems	Partial	Legacy systems are monitored manually, but procedures are inconsistent
Encryption	No	Customer payment information is not encrypted
Password Management System	No	No centralised password management system is in place

Physical and Operational Controls

Control	Implemented	Notes
Locks	Yes	Physical locations are secured with locks
CCTV Surveillance	Yes	Surveillance systems are installed and operational
Fire Detection and Prevention	Yes	Fire alarms and prevention systems are active and functioning properly

Summary

The assessment identified multiple missing administrative and technical controls that increase organisational risk. The most significant issues include missing encryption, lack of disaster recovery planning, absence of an intrusion detection system, and weak access control implementation.

Although Botium Toys has implemented physical security measures and basic technical protections such as firewalls and antivirus software, additional controls are needed to improve overall security and compliance readiness.
