| Entry            | #1                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Description      | Documenting a ransomware security incident involving a health care organisation and analysing the cause, impact, and incident details using the 5 W's method                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Tool(s) Used     | None                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| The 5 W's        | <p><b>Who:</b> An organised group of unethical hackers targeting organisations within the health care sector.</p> <p><b>What:</b> A ransomware attack encrypted critical company files and disrupted access to medical records and business systems.</p> <p><b>When:</b> The incident occurred on a Tuesday morning at approximately 9:00am.</p> <p><b>Where:</b> The incident occurred within a small U.S. health care clinic specialising in primary-care services.</p> <p><b>Why:</b> The incident occurred after employees received phishing emails containing malicious attachments. Once downloaded, malware installed ransomware that encrypted company files. The attackers appeared financially motivated and demanded payment in exchange for a decryption key.</p> |
| Additional Notes | <ul style="list-style-type: none"><li>- How could stronger phishing awareness training and email filtering reduce the likelihood of future attacks?</li><li>- Did the organisation keep secure backups and a disaster recovery plan to restore encrypted data without paying the ransom?</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
